Mammal Anatomy: An Illustrated Guide

Book Information

Library Binding: 287 pages

Publisher: Cavendish Square Publishing; Ill edition (September 2010)

Language: English

ISBN-10: 1563678063

ISBN-13: 978-0761478829

ASIN: 0761478825

Product Dimensions: 1 x 8.5 x 10 inches

Shipping Weight: 2.4 pounds (View shipping rates and policies)

Average Customer Review: 3.9 out of 5 stars 2 customer reviews

Best Sellers Rank: #373,652 in Books (See Top 100 in Books) #18 in Books > Teens >

Education & Reference > Science & Technology > Anatomy & Physiology #1296 in Books >

Science & Math > Biological Sciences > Anatomy

Customer Reviews

The diversity of the mammal family is represented in the 14 articles contained in this resource. Each article ranges in length from 16 to 24 pages and discusses one particular species or group. Besides humans, the mammals that are discussed include chimpanzees, dolphins, elephants, giraffes, gray whales, grizzly bears, kangaroos, lions, manatees, seals, squirrels, wolves, and zebras. Arranged alphabetically, each article begins with a family tree taxonomy, discussion of related animals, and an overview of featured systems. These systems (external, skeletal, muscular, nervous, circulatory, respiratory, digestive and excretory, and reproductive) receive detailed treatment on subsequent pages. Articles are signed, well written, and provide detailed information. Each article also includes numerous full-color photographs, charts, and diagrams. Sidebars and boxes highlight interesting facts. A glossary, an index, and resources for further study conclude the book. The volume is a repackaging of the publisher's multivolume Animal and Plant Anatomy (2006). Libraries already owning the larger set will not need to purchase this newer title as it does not provide supplemental material. Though this is a useful, interesting, and browsable volume, because of the limited number of mammals covered, only schools and libraries where resources on animal anatomy are highly requested or that have large budgets will want to consider it. Grades 8-12. --Shauna Yusko

The content is not as inclusive, or as detailed, as I had expected for the price. Chiropterans [bats] are not included. They are the second most successful order of mammals [Rodentia being the most

successful] and their anatomy is worthy of mention. For example, a discussion of their hindlimb orientation would be most valuable since their hindlimbs are rotated 180 degrees from most mammals, requiring pelvic as well as femoral adaptations. I am looking for a more comprehensive comparative anatomy source, or sources, for mammals as well as for amphibians, reptiles and birds.

Written in a way that is not too technical and answers many questions that the 'non' biologist would be confronted with. As a docent in a zoo I need simple information to share. It is not a children's book but would be an asset to any classroom.
