FIRE: How Fast, Inexpensive, Restrained, And Elegant Methods Ignite Innovation

Synopsis

Why do some programs deliver their product under cost, while others bust their budget? Why do some deliver ahead of schedule, while others experience endless delays? And most importantly, which products work better - the quick and thrifty or the slow and expensive? Which situation leads to superior equipment? In this story-filled blend of quirky pop culture and practical engineering insight, Dan Ward presents an entertaining and useful framework for pursuing rapid, frugal innovation. FIRE has something for everyone: strategic concepts leaders can use as they cast a vision, actionable principles for managers as they make business decisions, and practical tools for workers as they design, build, assess, and test new products. This remarkable book will make you laugh, make you think, and equip you to leverage the power of constraints. You'll learn how to: Build strategies for speed that enhance accountability and ensure your products are well aligned with market needs Design your organizations, products, and processes with thrift in mind, solving problems with intellectual capital instead of financial capital Unleash the power of small teams, using short schedules, tight budgets, short meetings, and short documents Streamline your designs and cut through unnecessary, unproductive layers of bureaucracy With unflinching candor, Ward also shows how the FIRE method can lead to failure. Taking a deep look at several negative outcomes, he show how to make failures optimal rather than epic. Tech professionals and curious amateurs alike will come away with a deeper understanding of innovation. Plus there's a funny story about a dishwasher that just might change the way you buy major appliances.

The best way to learn is to hear a good storyteller talk in simple, straightforward terms that use relatable specific examples to reinforce the stories. F.I.R.E. accomplishes this teaching masterfully. Dan Ward's style hooks you in with something that you can understand and relate to, then makes his point in a way you're sure to remember. I guarantee every time I look at a ridiculously long and over complicated PowerPoint presentation, I'm going to wonder who got stoned before hitting "save". The F.I.R.E. approach, while not difficult to comprehend, is reinforced with great historical and current examples and leaves you nodding your head saying, "I can do that!" He clearly believes in this approach, but also paints it into a frame of reality by illustrating when it is or is not applicable. And while Dan's commitment to this approach is clear and resounding, it never comes off as preachy. F.I.S.T is a great cultural thought piece told in a clear, understandable, and fun way by a brilliant storyteller.

I think this book is terrific. As a self-proclaimed systems acquisition professional, I've read a lot of books detailing how and why things go wrong (and occasionally right) on defense programs and projects. Dan Ward's Fast, Inexpensive, Restrained, and Elegant method for product development, as well as his engaging and fun writing style, present a great antidote to much of the doom and gloom defense acquisition literature out there. The principles for product development that Dan outlines and illuminates are applicable far beyond the defense industry, however, and I finished his book with an encouraged and positive feeling that no matter what I might be working on, the F.I.R.E. approach would help to make the outcome better.

If you think simplicity is easy, you've never worked in government or tried to launch a product. Complexity waits in every corner to blow up your scope and schedule and ensure your product either a) achieves failure or b) doesn't even get off the ground. Dan's principles for fast, inexpensive, restrained and elegant innovation make for a great acronym but even better advice for product developers. And his storytelling makes for an entertaining read that anyone who has ever worked in government or technology will appreciate. He also backs it up with data, making this a solid manual for product developers and requirement owners everywhere. This book should be required reading for anyone with budget or product responsibility. Enough said!

FIRE should be required reading for all acquisition professionals in the federal government. DAU and FAI should provide copies to every acquisition 101 student to embrace these core concepts at the dawn of their career. Program and project managers in all industries can benefit from FIRE to improve project success and drive innovation. Dan conveys the core messages of speed, thrift, simplicity and restraint through a series of entertaining stories in a truly enjoyable read. You don't have to take Dan's word for it, he shows you how NASA, the Air Force, and many others achieved great success at a fraction of the cost, schedule, and resources of epic failures. FIRE hacks the acquisition environment that was built up on decades of bureaucratic layers, policies, and culture, to show you how smart decisions early in the program can achieve remarkable mission outcomes. Dan is a dynamic writer and speaker whose unique style stands out as an acquisition thought leader.

Wow!!! This book is a "must read" for leadership in government service, corporate management and project leaders at every level! It's easy to understand, entertaining and provides clear insight on how to deliver a superior product or service in the fastest, most effective, simplistic and inexpensive way. I now know what I'm getting my employees for Christmas this year!

The ideas in this book are apparently well-known, and have been examined in other books, so why are so many projects late and over-budget? This was my first exposure to the idea that paring things down and moving quickly not only avoids time and budget issues, but often [usually?] delivered a better product. I found the author's conversational style easy to burn quickly through, his examples are entertaining and educational, and overall, the book made a huge positive impression on me. If you're already familiar with and convinced about these ideas, you probably have no need to read this book, but for those of you coming across these concepts for the first time, or who want to give it another look because they weren't convinced earlier, I cannot recommend F.I.R.E. highly enough.

Especially in the face of the beurocracy. Mr. Ward describes a sweet method of working around this problem. I will be using this method in the future.

en exceptional book. Dan is not scared to say what he thinks. With my 35 years in projects what he says is exactly what I have experienced. Projects have grown so big and the companies so beaucratic that that everything move along at a much delayed pace. Read his book to get a fresh perceptive and way to handle projects. You will be enlightened
